

St Clair LAC650

St Clair LAC650 is a light diffusing PVC designed for sun protection with an excellent UV barrier.

The range of flame retardant fabrics are extremely durable in outdoor environments and are designed for fixed or foldable structures.

The CLEANGARD® finish is a topcoat lacquer designed to provide a longer life. A tough and glossy finish prevents soiling, is easier to clean and will withstand frequent cleaning.

System Lowick is a unique antiwicking process which considerably reduces micro-organism penetration into the heart of coated fabrics. Lowick system creates capillarity blockades throughout the coated fabric, halting migration. This helps the fabric to last longer and look like new.

Developed for stationary or retractable roofing structures, pergolas, awnings, marquees, shade structures, shade sails and umbrellas.

Applications

Architectural Roof System
Vertical
Fixed
Pivot Arm

Technical Specifications

Base Cloth

High Tenacity polyester - 1100dtx

Coating

PVC - Lowick

Finish

Cleangard®

Weight

680gsm

Width

3000mm

Thickness

0.45

Protection

100% UV

Flame Retardant

Tested to AS1530.2 +3 /M2

Warranty

5 year

Made in

France

Care and cleaning

For a longer aesthetic and assured functionality of your Dickson PVC fabric it should be regularly cleaned. This cleaning recommendation does not cover printed products. For the best cleaning results rinse away any dirt attached to the surface using clean cold or warm water. For heavily soiled fabric a pressure cleaner with the widest angle spray can be helpful. Use a non ionic detergent, neutral soap to the surface by either spraying or applying it with an appropriate soft nonabrasive brush or sponge. Allow the cleaning treatment to remain on the surface for 5 minutes and after this time, rinse off dirt and cleaning agent using clear cold or warm water in order to remove the entire cleaning agent. It is extremely important to let dry before any storage. For more detailed cleaning guide please contact our office.
